MODULE 05 · PRODUCT KNOWLEDGE

Know What You're Talking About

Understand TechSavvy's zero-fee model, the cash discount program, and what makes it genuinely different.

- Zero-fee model
- Fully legal
- No contracts

The Problem TechSavvy Solves

Most business owners who accept credit cards have no idea how much they're actually paying. Processors hide fees in complex statements and lock merchants into long contracts.

3–4.5%

Average Effective Rate

What most merchants unknowingly pay after all fees are calculated — far higher than the "advertised" rate

$800–$2K

Monthly Overcharge

What the average Hawaii small business pays in total processing fees every single month

73%

Don't Know Their Rate

Of small business owners surveyed couldn't name their actual effective processing rate

The free statement analysis is TechSavvy's opening move — it shows merchants the real numbers, side by side. No pitch

- When you mention the free analysis, you're not asking them to commit to anything — just to see their own numbers.

The Cash Discount Model — How It Works

1. **Merchant posts prices as the "cash price"**
   The price they actually want to receive for their product or service

2. **Card-paying customers pay a small surcharge**
   Typically 3–4% added at the terminal — shown clearly before they confirm payment

3. **Cash-paying customers pay listed price**
   No surcharge — the posted price is exactly what they pay

4. **Surcharge covers the processing fee entirely**
   The merchant keeps 100% of every sale, whether paid by card or cash

5. **TechSavvy handles all compliance requirements**
   Signage, disclosures, terminal configuration — fully legal in all 50 states

Think of it like the gas station model — cash price vs. card price. It's everywhere now. Customers understand and accept it.

What Makes TechSavvy Different

There are hundreds of payment processors. Here's why TechSavvy stands out — and why merchants who switch almost never go back.

Zero monthly fees
Typical processors charge $30–$150/month in statement fees, gateway fees, and PCI fees

No contracts
Most processors lock merchants into 2–3 year agreements with early termination fees of $300–$500+

One-time terminal cost
Other processors lease terminals for $30–$80/month — merchants never own the equipment

Free website included
No other processor offers a custom-built website as part of their merchant package

Local Hawaii support
TechSavvy is based in Hawaii — merchants get a real local rep, not an overseas call center

Common Questions — Know These Cold

You'll get product questions during conversations. Here are the most common ones and exactly how to answer them.

Q: Will my customers mind the surcharge?

A: Most don't. Card surcharges are now mainstream — gas stations, restaurants, and retailers all do it. The terminal shows the amount clearly before the customer confirms.

Q: Is the $399 terminal really a one-time cost?

A: Yes. One-time purchase. They own it outright. No monthly rental, no lease. If they ever leave TechSavvy, they keep the terminal.

Q: What if I want to leave?

A: No contract, no cancellation fee. They can leave anytime with zero penalty. TechSavvy keeps merchants by delivering value, not by trapping them.

Q: Is this legal in Hawaii?

A: Yes — 100% legal in Hawaii and all 50 states. The FTC and card networks allow surcharges when disclosed properly. TechSavvy handles all required signage and compliance.

Q: How long does setup take?

A: Most merchants are fully live and processing within 3–7 days of signing. TechSavvy handles the application, equipment shipping, and activation.

The Free Statement Analysis — Your Best Tool

The free analysis is TechSavvy's most powerful conversion tool — and your most powerful conversation opener. Use it every time.

Current effective rate

The merchant's real all-in rate after every fee is counted — usually much higher than they think

Monthly fee breakdown

Every line item explained in plain English — gateway fees, statement fees, PCI, batch fees, etc.

Dollar savings projection

Exactly how much they'd save per month switching to TechSavvy's zero-fee model

Side-by-side comparison

Their current costs vs. TechSavvy — presented clearly, without pressure

"Would you be open to a free 10-minute look at your statement? No commitment — they just show you the real numbers."

"There's zero cost for the analysis — TechSavvy just wants to show you what you're actually paying vs. what you could be paying."

- Keep this page as your go-to reference before any conversation. Knowing the product cold makes every interaction feel natural and confident.

Product Cheat Sheet — Pocket Reference

What TechSavvy Eliminates

- Monthly processing fees (avg $300–$1,500/mo)
- Long-term contracts & cancellation penalties
- Terminal lease payments
- Hidden statement & gateway fees

What Merchants Get

- $399 terminal (one-time, they own it)
- Free custom business website
- Free statement analysis
- Local Hawaii support team

How Cash Discount Works

- Card customers pay listed price + 3–4% surcharge
- Cash customers pay listed price as-is
- Merchant keeps 100% of every sale
- Fully legal — TechSavvy handles compliance

If They Ask About Legality

- "Yes — legal in all 50 states since 2013"
- "Card networks allow it when disclosed properly"
- "TechSavvy handles all signage & compliance"
- "Gas stations have done this for decades"

■ The most important thing to remember: you're not selling a product — you're sharing a solution to a problem they already have. The math does the convincing.
